

## Important points to note:

- All buildings are fully guaranteed to be free from defects and faulty installation for a period of 12 months.
- We would like to remind customers that timber is an organic product, subject to naturally occurring changes that result from different environmental conditions i.e. changes in colour, surface, splits and shrinkage. We cannot accept responsibility for these natural changes.
- All base work is the responsibility of the customer, as is the safe securing of the building once installed. We require a level solid base, either paving slabs or concrete upon which to install your building.
- Pressure treated floor bearers laid on top of your prepared base, are an important and valuable option as they allow the circulation of air underneath the timber floor and help to keep it dry and sound.
- Please allow as much room as possible around the building for our fitters to work during installation.
- Our installers will need a clear access to carry building sections from the vehicle to your prepared base, with no height restrictions or tight, sharp corners to negotiate.
- Our installers cannot lift sections over fences more than 4' in height or over buildings such as garages. If the only access is through the house a straight run is required, many sections will not pass through doorways. Please advise us in advance if there are any difficulties regarding access.
- Always make allowance for any roof overhang when buildings have to go into confined spaces.
- All of our deal and cedar buildings are treated with a good quality preservative on the inside, as well as the outside, prior to leaving the factory. We recommend that you re-treat your building at regular intervals to maintain the appearance and lifespan of your building.
- Cedar buildings have cedar windows, doors and external cladding only i.e. they have deal framing, floors, roofs and verandahs.
- With the exception of the Bewdley range, Toolstores and Logstores, all of our pressure treated buildings have the floor treated with a high quality preservative for added protection.
- Ironmongery is black japanned as standard.
- 4mm toughened float glass (Bewdley range glazed with 3mm horticultural glass, playhouses glazed with safety acrylic).
- All roofs are protected with a layer of mineral felt unless otherwise stated, available in a choice of two colours.
- All timber sizes stated are finished sizes i.e. after machining.
- Please note that finished sizes can vary by plus or minus 1mm.
- All building dimensions shown in this brochure are approximate, based on external wall sizes.
- All timber used in the construction of our buildings originates from sustainable forests.
- As it is our policy to continually improve products, methods and materials, we reserve the right to change specifications from time to time, we will not make any significant variations without your agreement.

## Quality Garden Sheds & Workshops

Welcome to the Malvern Collection range of sheds, workshops and storage buildings. These buildings offer you a wide range of stylish and practical solutions for your garden.

We are a family run business that was established in the early 1970s. All of our buildings are hand built to order by skilled craftsmen in our factory in Worcestershire, they are then delivered and installed by our own teams of experienced and skilled fitters.

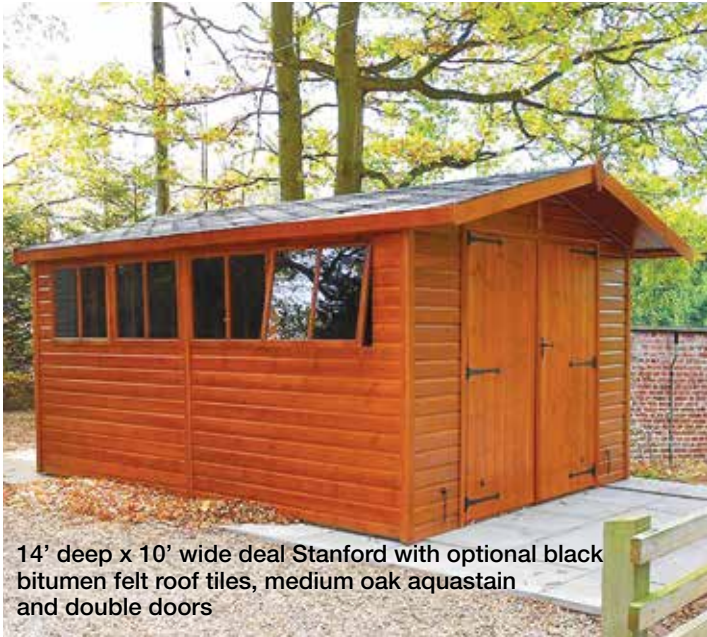

We use only the best materials available. Our deal buildings are constructed using kiln dried slow grown pine from one of Sweden's top northern sawmills. Our cedar buildings are constructed using western red kiln dried clear grade cedar.

Our sheds are renowned for strength, longevity and finished to the highest standards. With our extensive range and versatility in design, size and finish, we can provide you with a shed that can complement your garden and meet your exact requirements.

Many manufacturers claim their garden buildings are built to the highest standard and quality, however we strongly recommend that you visit our sheds on display at over fifty of the UK's top show sites, where you can compare the quality, strength, materials and workmanship of a 'Malvern Collection' building!

Thank you for taking the time to look through our brochure.

Superior workshops & storage rooms offering unrivalled quality with
